Pedestrians account for over 17.5 percent of all fatalities in motor vehicle traffic crashes, and many of these deaths occur at uncontrolled crossing locations such as mid-block or un-signalized intersections. These are among the most common locations for pedestrian fatalities generally because of inadequate pedestrian crossing facilities and insufficient or inconvenient crossing opportunities, all of which create barriers to safe, convenient, and complete pedestrian networks.

Expecting pedestrians to travel significantly out of their way to cross a roadway to reach their destination is unrealistic and counterproductive to encouraging healthier transportation options. By focusing on uncontrolled locations, agencies can address a significant national safety problem and improve quality of life for pedestrians of all ages and abilities.

During this webinar series, learn about Proven Safety Countermeasures which directly impact pedestrian safety. The first three and a half parts of the webinar series will focus on delivering the “Safe Transportation for Every Pedestrian (STEP)” day-long course. The second ½ of the fourth webinar will feature an update on Ohio’s application of the Proven Safety Countermeasures for all public roadways!

Dates, times and registration links for the webinars are available below. Register soon to secure your spot!

For more information on STEP, please visit the Federal Highway Administration’s website at: [https://safety.fhwa.dot.gov/ped_bike/step/resources/](https://safety.fhwa.dot.gov/ped_bike/step/resources/)
