

Focus on Local Road Safety

Collaborating to reduce fatalities on our communities' roads

A special series of webinars, workshops, and training opportunities for municipal and state highway maintenance agency leadership, elected officials, law enforcement, and other public partners and stakeholders committed to roadway safety in New Hampshire.

Why?

Last year, we lost 135 lives on our state's roads, leaving thousands of individuals grieving the death of a loved one, with lives forever altered due to these traffic fatalities. There remains significant work ahead for all of us to reach our state's important goal of reducing roadway deaths by 50% by year 2030. Because *one life lost* is one too many.

How?

Through collaboration, education, and action

The Local Technical Assistance Program (LTAP) team at UNH T2 is hosting this special series of webinars, workshops, and training for municipal and state highway maintenance agency leadership, elected officials, law enforcement, and other transportation partners and stakeholders from public agencies throughout the state.

We aim to build collaboration, partnership, and not only inspire, but jumpstart, action through resources, relationships, and deeper knowledge of the proven safety countermeasures and practices available to improve safety on our local roads, to save lives.
